EDUCATION

VNUHCM – University of Science HCM, Vietnam

B.Sc. in Mathematics and Computer Science *2022 - 2026*

- **GPA**: 3.2/4 (Graduated)
- **Relevant Coursework**: Database Management Systems, Data Mining, Data Structures and Algorithms, Introduction to Artificial Intelligence, Machine Learning, Statistics,...

TECHNICAL SKILLS

Programming Languages: SQL, Python, C++, R

Databases & Data Integration: Oracle DB (19c RAC/ASM), Oracle Data Integrator (ODI), Oracle GoldenGate (OGG), SQL Server, PostgreSQL

Big Data & Streaming: Apache Spark, Apache Kafka, dbt, Apache Airflow, Dagster

DevOps & Tools: Linux, Docker, Git

WORK EXPERIENCE

SACOMBANK HCM, Vietnam

Database Administrator Intern *Jan 2026 – Mar 2026*

Potential Intern Program 2026

- Installed and configured **Oracle Database 19c** on **Oracle Linux**, including a **2-node Oracle RAC** cluster and **Oracle ASM** storage configuration.
- Developed **ETL** workflows using **Oracle Data Integrator (ODI)**, including mappings, packages, scenarios, and agents.
- Gained hands-on experience with enterprise **Oracle Database**, **OGG**, and **ODI** technologies in **banking data platform** projects.

Database Administrator *Mar 2026 – Present*

- Administered **Oracle Database Enterprise** infrastructure for **Production** and **UAT** environments, ensuring **high availability**, performance, and operational reliability.
- Built and maintained an **ODI Cluster** to support scalable enterprise **ETL** workloads.
- Operated enterprise **OGG** replication pipelines for **high-volume banking systems**, delivering reliable **near real-time data streaming** between heterogeneous databases.
- Participated in the migration from **OGG Classic** to **OGG Hub (Microservices Architecture)** and deployed **Oracle HTTP Server (OHS)** as a reverse proxy for the **OFSAA** platform.
- Improved database performance through **SQL tuning**, execution plan analysis, **indexing**, **table partitioning**, and **optimizer statistics** management.

PROJECTS

Real-Time CDC Data Pipeline

Personal project *Feb 2026 – Mar 2026*

- Built a **CDC pipeline** to sync data changes from **MySQL** to **MongoDB** in near **real time** using **Debezium, Kafka, and Spark Structured Streaming**.
- Used **30GB** of GitHub Archive data as the source dataset for ingestion, streaming, and synchronization testing.
- **Automated CDC** setup with **Python**, including MySQL schema initialization, data loading, Kafka topic creation, Debezium connector registration, and Spark job execution.
- Handled **create, update, delete, and snapshot** events with MongoDB upserts, checkpoints, retry logic, structured logs, and dead-letter queue support.
- **Tech:** Python, Spark, Kafka, Debezium, MySQL, MongoDB, Docker

CERTIFICATION AND AWARDS

Top 24 Vietnam Datathon 2023 - Kyanon Digital *Dec 2023*

Training & Business Case Program - AIESEC *Jul 2024*

Spring School on Statistics and Machine Learning - VIASM *Apr 2025*
